

METHOD FOR MATCHING FINANCIAL SUPPLY TO DEMAND

ABSTRACT

A method for a service provider to facilitate financial transactions between demanders and suppliers. In one embodiment, the service provider receives a referral from a first supplier regarding a first demander rejected by the first supplier. Data relating to the first demander is entered into a database in association with a confidential demander code. A second supplier, through a database search, is provided information on prospective demanders, initially only by confidential code, and ultimately arranges a meeting with the first demander arranged by the service provider. If the first demander and second supplier consummate a financial transaction, the service provider is compensated and the service provider shares the compensation with the first supplier who referred the first demander. Related methods allow suppliers to search for other suppliers and demanders to search for suppliers or other demanders. Computer program products for carrying out the method steps of the invention are also claimed.
